

PHYSICAL SCIENCES (PSC)

PSC 2100 - Foundation of Physical Science (3 Credits)

Explores the foundations of physical science including the scientific method, philosophy and brief history of modern science. For science content, the Physics fundamentals are presented then connected to the other major physical sciences of Astronomy, Chemistry and Geology, including the role that biological evolution has played in the history of our planet. The limits of science are explored via the topics of pseudoscience, junk science and the interaction of science and religion both historically and currently.
